A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral nervous localised neuropathies and central nervous system disease, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and

                                                                                                                                                                                                                                                                                                                             The present invention provides the protein and coding sequences of novel proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a protein of the invention.

The invention relates to 186 novel genes and their fragments (nucleic acid sequences: AAV59511-V59812; amino acid sequences AAW74731-W75026) which are useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. Also, pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the new polynucleotides. Specific uses are described for each of the 186 polynucleotides, based on which tissues they are most highly expressed is (see AAV59511 for described uses).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      to the Songlementary strand of a polynucleotide which comprises one of C the 5602 nucleotide sequences defined in the specification, where the CO oligonucleotide comprises at least 15 nucleotides; or (b) a combination CC of an oligonucleotide comprising a sequence complementary to the C complementary strand of a polynucleotide which comprises a 5'-end c sequence and an oligonucleotide comprising a sequence, where the C polynucleotide which comprises at least 15 nucleotides and the combination of the 5'-end sequence of sequence, where the C oligonucleotide which comprises at least 15 nucleotides and the combination of the specification. The primer sets can be used in antisense therapy and in the specification. The primers set useful for synthesising polynucleotides, c particularly full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers are also useful for the full-length cDNAs. The primers allow obtaining of the full-length cDNAs challafor the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs casaily without any specialised methods. AAH03166 to AAH13628 and AAH3633 to AAH3742 represent human cDNA sequences; AAB92446 to AAB95893 represent buman amino acid sequences; AAB92446 to AAB95893 represent invention.

gene therapy applications. Antisense nucleic acid molecules and expression vectors containing the TANGO nucleic acids are also described. Diagnostic assays can be used to detect genetic alterations in the TANGO nucleic acids and to identify compounds that bind to or modulate activity of the TANGO proteins. Anti-TANGO antibodies are used diagnostically to monitor protein levels in tissue as a clinical testing procedure. TANGO 437 shows homology to human Gene 100. TANGO 437 nucleic acids and proteins may be used to diagnose, treat and monitor immune-related disorders, pathogenic infections, hepatic disorders (e.g. jaundice), cell proliferative disorders (e.g. lymphoma, cancer) and autoimmune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence representing human TANGO 437 is isolated from cDN. clone jthia045b02 from a human mixed lymphocyte reaction cDNA library. TANGO 437 is 1 of 4 novel human transmembrane proteins which also includes TANGO 315 (AAU00498-AAU00499), TANGO 330 (AAU00500-AAU00501) and TANGO 480 (AAU00503). The nucleic acids encoding these proteins are useful as modulating agents in regulating a variety of cellular processes and can be used to express the proteins in a host cell in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              autoimmune diseases and inflammatory disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Isolated secreted proteins and their encoding nucleic acids are used for diagnosis and treatment of e.g. bacterial and viral infections,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     9; Fig 19; 261pp; English.

The polynucleotides, polypeptides, and antibodies are useful for preventing, treating, or ameliorating diseases associated with anomalies in calcium trafficking across the plasma membrane. They are used to diagnose, detect and treat or prevent diseases or conditions such as neural disorders (e.g. HTV-Induced dementia), immune system disorders (e.g. rheumatoid arthritis), muscular disorders (e.g. muscle contractile dysfunction), reproductive disorders, gastrointestinal disorders, pulmonary disorders, cardiovascular disorders (e.g. arrhythmias), renal disorders, proliferative disorders, and/or cancerous diseases and conditions (e.g. lung carcinoma or breast cancer).

N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer-associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB7789 represent sequences used in the exemplification of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       and proteins may be used in screening assays, predictive medicine (e.g. diagnostic assays and pharmacogenetics) and treatment of disorders characterised by insufficient production of IC23927 (e.g. central nervous system disorders, pain disorders, or disorders of cellular growth, differentiation or migration). The IC23927 nucleic acids and proteins are also useful as targets for developing modulating agents to regulate a variety of cellular processes, such as: ion transport (e.g. ion conductance); membrane excitability and/or polarisation; synaptic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 transduction (e.g. pain signalinty and/or polarisation; synaptic transduction (e.g. pain signaling); cell activation; cell proliferation; cell growth; cell differentiation; cell migration and muscle contraction. Administration of a modulator of 123927 (especially by gene therapy) may be used to treat main or a main discorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents the human ion channel 23927 (IC23927) protein, which is claimed in the invention. The ion channel family of proteins is a large family of membrane bound proteins responsible for a wide range of transport and signalling functions in cells. The invention comprises IC23927 proteins and nucleic acids. The IC23927 nucleic acids compared to the invention comprises IC23927 proteins and nucleic acids. The IC23927 nucleic acids acids.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        be used to treat pain or a pain disorder.

These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a protein of the invention.

This clone was used as a probe to screen additional IMx32 cell cDNA libraries to obtain overlapping clones which were then employed for screening until a sufficient series of clones to span the length of the nucleotide sequence encoding the human alpha 1D subunit were obtained, see AAQ37811. AAQ37812 provides the sequence of an alternative exon encoding the transmembrane domain of the alpha 1D subunit. The alpha 1D protein

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 clones, which were then employed for screening until a sufficient series of clones to span the length of the nt seuence encoding the human alpha 1D subunit was obtd. Full-length clones were then constructed by ligating partial clones. AAQ84653 shows the nt sequence of the cDNA encoding the alpha 1D subunit. The Alpha 1D protein has a calculated Mr of 245,163. It contains four putative internal repeated sequence regions which represent 24 putative transmembrane segments. It mediates DHP-sensitive high-voltage, long-lasting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The alpha 1D subunit cDNA has been isolated using fragments of the rabbit skeletal muscle calcium channel alpha 1 subunit cDNA as a probe to screen a cDNA library of human neuroblastoma cell line IMR32, to obtain clone alpha1.36, This close was used as a probe to screen additional IMR32 cell cDNA libraries to obtain overlapping

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                               The alpha 1D subunit cDNA has been isolated using fragments of the rabbit skeletal muscle calcium channel alpha 1 subunit cDNA as a probe to screen a cDNA library of human neuroblastoma cell line in MR32, to obtain clone alpha1.36, This close was used as a probe to screen additional IMR32 cell cDNA libraries to obtain overlapping clones, which were then employed for screening until a sufficient series of clones to span the length of the nt seuence encoding the human alpha 1D subunit was obtd. Full-length clones were then constructed by ligating partial clones. AAQ84653 shows the nt sequence of the cDNA encoding the alpha 1D subunit. The Alpha 1D protein has a calculated Mr of 245,163. It contains four putative internal repeated sequence regions which represent 24 putative transmembrane segments. It mediates DHP-sensitive high-voltage, long-lasting calcium channel activity. AAQ84654 shows an alternative exon encoding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Calcium channel subunit; antagonist; agonist; diagnosis; Lambert Eaton Syndrome.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         exon encoding the IS6 transmembrane domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      30-NOV-1995
